(54) INK JET RECORDING SHEET

(57) Abstract:

PROBLEM TO BE SOLVED: To provide an ink jet recording sheet having good color developing of a recording image while incorporating a cloth like peculiar feeling and good preservability of a durable and recording image of a sheet in the case of using outdoor.

SOLUTION: An ink receptive layer is provided on one surface of a nonwoven fabric containing a fiber having a fiber size of 0.3 to 20 μm and a value obtained by dividing a length of the fiber by the fiber size of 800

to 10,000 as main body fiber. An ink receptive layer is provided on one surface of a nonwoven fabric blended with 1 to 50 pts. or less of heat fusion bonded fibers to 100 pts. of the main body fiber having a fiber size of 0.3 to 20 μm and a value obtained by dividing a fiber length by a fiber size of 800 to 10,000. Particularly, the layer contains a synthetic noncrystalline silica having a mean particle size of 2 to 10 μm as a white pigment, thereby further improving the preservability of a recorded image in the case of allowing to leave to stand for outdoor.
